MAXHUB V6 Classic series receives certification for Zoom Rooms

MAXHUB, a leading provider of innovative communication, conferencing and collaboration solutions for the corporate market, has been awarded Zoom Rooms certification for its V6 Classic series of all-in-one touch displays. This means that, from now on, all devices will be delivered with the popular collaboration board solution. Zoom Rooms was specially developed for the requirements of hybrid meetings and offers an outstanding video conferencing experience – whether in a huddle space or large conference room.

Brilliant pictures

The touch displays in the MAXHUB V6 Classic series are available in sizes ranging from 55 to 86 inches. They offer 4K UHD resolution with over 1.07 billion colours and thus achieve a brilliant level of detail in every situation. At the same time, they deliver lifelike images thanks to a colour accuracy of less than 2 Delta E as well as a wide colour spectrum of more than 90% of the NTSC colour scale. 20 touch points allow up to two people to write on the display simultaneously, while zero-gap technology ensures precise input. Hygiene has also been considered here, as the antibacterial front glass prevents the transmission of pathogens.

Audiovisual excellence

The audio and video features of the MAXHUB V6 Classic series are also impressive. The integrated 92° HFOV 48MP 4K UHD camera captures crystal-clear images, while the 8-array microphone ensures optimal sound quality for seamless communication. At the same time, recordings are further optimised by AI-assisted auto-framing and speaker tracking. For impressive audio output, the touch displays have two 10W + 20W speakers. Thanks to this audiovisual quality, even remote participants have the feeling of being present at the meeting.

Plug and play

Zoom Rooms comes pre-configured, meaning that the MAXHUB V6 Classic series is ready to use straight out of the box. The integrated Zoom Whiteboard with 10-point multi-touch functionality and annotation features facilitates brainstorming and collaboration, while Zoom Rooms Smart Gallery and Auto Framing features are seamlessly supported. With the integrated MAXHUB Share software, content can be shared wirelessly from any PC or mobile device, while preserving 4K resolution. The touch displays can be equipped with a plug-in Intel® Core™ i5 or i7 processor, making them a future-proof investment.
