

Kindermann at ISE 2024, Hall/Booth 2S300

Kindermann presents new touch displays for business applications

Kindermann is setting new standards in design, precision and function with its new TD-40xx series touch displays. Thanks to capacitive PCAP technology and an active stylus, users experience a particularly natural writing and operating experience. In addition to landscape mode, they also support portrait mode and can even be used as a desktop application.

Ideal for business

The new capacitive touch displays of the TD-40xx series from Kindermann are equipped with PCAP technology, which results in an extremely precise operating and writing experience. The devices are also supplied with an active pen that is charged via USB-C. The touch displays are compatible with the Microsoft Pen Protocol, so a Microsoft Surface Pen can also be used without any problems. Of course, the same applies in reverse: the active pen supplied can also be used on Surface devices. For easy connection of UC devices such as cameras, video soundbars, etc., the touch displays have an easily accessible interface on the top. In addition, the new TD-40xx touch displays have a frameless design with full-edge glass to blend into any environment.

Creative freedom

The new TD-40xx series from Kindermann impresses with its incredible freedom of use and offers users plenty of scope for creative development. In addition to the standard landscape and portrait modes, the touch displays can also be used as a "table", i.e. horizontally. This is a particularly attractive feature in museums, for example, where visitors can be more actively involved in exhibitions. Horizontal use also facilitates collaborative work on construction plans, brainstorming sessions and much more in architecture firms, design agencies and other creative environments. To support this flexibility, Kindermann has a range of roll stands that can be used for all touch display application scenarios.

Spoilt for choice

The touch displays of the new TD-40xx series from Kindermann do not have their own operating system, but they do offer an OPS slot. This can be equipped with either a Windows or a Google-certified plug-in computer, depending on individual requirements. Thanks to this modular design, the investment is future-proof. The TD-40xx series is available in 65, 75 and 86 inch sizes.

About Kindermann

Kindermann, founded in 1861, is the oldest company in the Pro AV industry and is today one of the leading suppliers acting as manufacturer and distributor. Kindermann has always managed in an intelligent way not only to adapt to new market conditions, but also to advance technologies.

Kindermann stands for conferencing, collaboration and connectivity. The world of work and education has changed massively. Collaboration in hybrid teams and digital teaching place new demands on technical equipment. This is exactly where Kindermann comes in with its smart solutions. Smart stands for intelligent, networked, intuitively operable, but also for sophisticated design.

The company has expanded its own portfolio and is thus represented internationally. For example, the Klick&Show product family is also very popular in many European countries. It shows how easily wireless collaboration and conferencing can work. The triumphant success of Kindermann touch displays is not only based on the trendsetting technology but is above all due to the intuitive user interface developed in-house. At the Eibelstadt site near Wuerzburg, series products such as table connection panels, brackets, ceiling lifts and media furniture are developed and manufactured. In addition, exclusive customer requests can be quickly implemented here.

Supplemented by a broad product portfolio in distribution, Kindermann enjoys an excellent reputation as a full-range supplier for conference, presentation and media technology, digital signage and dedicated education solutions.

As a manufacturer and distributor, Kindermann sells exclusively through qualified specialist dealers. Trade partners are supported with competent advice and individual project support - from planning to equipment and integration. Attractive special services round off the portfolio.
