MAXHUB XCore Kit Pro: Added value for Microsoft Teams Rooms

MAXHUB, a global leader in integrated communication and display solutions, is proud to introduce the MAXHUB XCore Kit Pro, a certified video conferencing solution for Microsoft Teams Rooms. Designed specifically for medium to large conference rooms, the XCore Kit Pro seamlessly combines cutting-edge technology with an easy-to-use design to deliver efficient and intuitive meeting experiences.

The MAXHUB XCore Kit Pro features a mini PC powered by a 12th-generation Intel® Core™ i5 processor, optimised to run Microsoft Teams Rooms for seamless collaboration. The solution also includes an 11.6-inch touchscreen tabletop console with an intuitive interface that allows users to start, join and control Teams meetings or share content with a single click. A built-in motion sensor automatically activates the device, ensuring meetings start promptly without delays. Fully certified by Microsoft after passing rigorous compatibility and performance testing, the XCore Kit Pro ensures seamless integration and reliability for Teams Rooms. Additionally, it has been honoured with the prestigious Red Dot Design Award 2024, highlighting its excellence in both functionality and design.

Dynamic video conferencing with dual screens and wireless content sharing

The Pro version of the MAXHUB XCore Kit family takes video conferencing to the next level with advanced features such as integrated wireless content sharing and support for 4K content via cable. Additionally, the system supports dual displays, enabling greater flexibility for conference setups. With the optional MAXHUB dongle, users can share content wirelessly from a laptop with a single click, making collaboration effortless.

More flexibility with an extra console

For larger meeting rooms, the MAXHUB XCore Kit Pro allows the addition of a second console to complement the standard tabletop console included in the package. This feature provides easy access to meeting controls for all participants, ensuring an inclusive and efficient experience.

Simplified connectivity for any room size

The touch console connects to the Microsoft Teams Rooms mini PC via a single Cat5e/Cat6a cable and offers flexible placement on the conference table without distance limitations, ensuring a streamlined setup for rooms of any size.

Remote device management made easy

With MAXHUB Pivot, IT administrators can easily monitor, control and update all room devices remotely, simplifying maintenance and ensuring optimal performance of all devices.
